

ECHO

LONG-SPAN CAPABILITIES

Echo Prestress suspended precast concrete slabs is a household name in Gauteng and surrounding provinces, renowned for its expertise in Prestressed Concrete. This innovative design is unmatched in strength, making it ideal for long spans and heavy load capacities. The beauty of prestressing lies in its efficiency: construction can commence as soon as the grouting between the joints is complete. All screeding is considered a finishing trade unless concrete topping is specified. In such cases, the topping is applied before constructing the internal walls—a rare exception.

The standout feature of Prestressed Concrete, however, is its speed. It significantly reduces construction time while delivering a host of technical advantages.
